3.5.1. pure::variants is low on memory .....	27
4. pure::variants Connectors .....	27
4.1. Installation of pure::variants Connectors .....	27

## 1. Introduction

Depending on the engineering tool landscape in place and on the desired data management mode for pure::variants models, the pure::variants setup consists of some or all of the components depicted as orange boxes in figure [Figure 1, “The Big Picture”](#). In this setup guide all components are described that have to be installed, updated, or configured to cover the different possible deployment scenarios. The components are grouped from IT perspective into components running on a server, and components running on the desktop clients. In one deployment scenario, only desktop client components depicted in the upper left might be needed, while in another scenario server components combined with a browser running on client side might be needed. There are also some boxes visualized in blue, e.g. Browser and LDAP, that are not delivered by pure-systems but interact with pure::variants components in certain deployment scenarios. In the following sections each of the orange boxes are explained from the perspective of administration and setup.

**Figure 1. The Big Picture**

The manual is available in online help inside the installed product as well as in printable PDF format. Get the PDF [here](#).

## 2. System Requirements

pure::variants has different system requirements, depending on the part of the software going to be installed. The following lists the system requirements for all parts of the software.

### 2.1. Eclipse based Client

- Operating System
  - Windows 7, 8, 10
  - Windows Server 2003, 2008, 2012, 2016, 2019
  - Linux 64 Bit with X11 Window System installed
  - Mac OS
- Software
  - Oracle Java SE 8 or OpenJDK 8

The Java compatibility is tested with the official Java Standard Edition provided by Oracle (<https://www.java.com/en/download/>) and the OpenJDK provided by Oracle (<https://jdk.java.net/archive/>).

- Eclipse 3.8.0 – 4.21
- Memory
  - Min: 2 GB
  - Recommended: 8 GB
- CPU
  - Min: Dual Core CPU
  - Recommended: 4 CPU cores
- HDD
  - Min: 10 GB free disk space

### 2.2. Model Server with Database

- Operating System

- Windows 7, 8, 10
- Windows Server 2003, 2008, 2012, 2016, 2019
- Linux 64 Bit
- Software
  - Oracle 9 or newer
  - MSSQL Server 2008 or newer
  - PostgreSQL 13 or newer
- Memory
  - Min: 2 GB
  - Recommended: 8 GB
- CPU
  - Min: 4 CPU cores
  - Recommended: 4 CPU cores (up to 10 active users) and + 1 CPU core for each additional 10 active users.
- HDD
  - Min: 10 GB free disk space
- Database Storage Requirements
  - MSSQL: 20 MB storage space per 1000 elements and revision
  - Oracle: 4 MB storage space per 1000 elements and revision
  - Postgres: 15 MB storage per 1000 elements and revision

## **2.3. License Server**

- Operating System
  - Windows 7, 8, 10
  - Windows Server 2003, 2008, 2012, 2016, 2019
  - Linux 64 Bit
- Memory
  - Min: 512 MB
  - Recommended: 1 GB
- CPU
  - Minimum and Recommended: Dual Core CPU
- HDD
  - Min: 10 GB free disk space

## 2.4. Web Components

- Operating System

- Windows 7, 8, 10
- Windows Server 2003, 2008, 2012, 2016, 2019
- Linux 64 Bit

- Software

- Oracle Java SE 8 or OpenJDK 8

The Java compatibility is tested with the official Java Standard Edition provided by Oracle (<https://www.java.com/en/download/>) and the OpenJDK provided by Oracle (<https://jdk.java.net/archive/>).

- Apache Tomcat 8.5.x/9.x or WebSphere Liberty Kernel v19.0.0.6+

- Memory

- Minimum: 2 GB
- Recommended: 32 GB

One open model with 1000 elements needs about 100 MB memory per user and revision.

- CPU

- Min: 4 CPU Cores
- Recommended: 4 CPU Cores (up to 10 active users) and + 1 CPU Core for each additional 10 active users.

- HDD

- Min: 10 GB free disk space

## 3. pure::variants Client

pure::variants can be installed using the pure::variants installer as a stand-alone application or it can be installed into an existing Eclipse based tool chain. For both ways to install pure::variants we recommend to use the pure::variants installer.

The pure::variants installer is available for Windows only. If the operating system platform is Linux or MacOS X, pure::variants needs to be installed into an existing Eclipse instance. See [Section 3.1.2, “Install into an existing Eclipse”](#).

In case of very strict firewalls or no network access on the installation machine either install pure::variants as a stand-alone application. ([Section 3.1.1, “Install with pure::variants Installer”](#)) or install pure::variants into an existing Eclipse instance using an update site. ( [the section called “Using update site”](#)). These installation methods allow you to first download the installation packages and install pure::variants afterwards.

The installation procedures are described below. Once the initial installation has finished, installation of a license is required to use pure::variants. See following section for more information on license installation.

### 3.1. Install pure::variants Client

#### 3.1.1. Install with pure::variants Installer

This installation method is available for Windows only. If you do not use Windows please see [Section 3.1.2, “Install into an existing Eclipse”](#).

To be able to successfully install the pure::variants client you need to following:

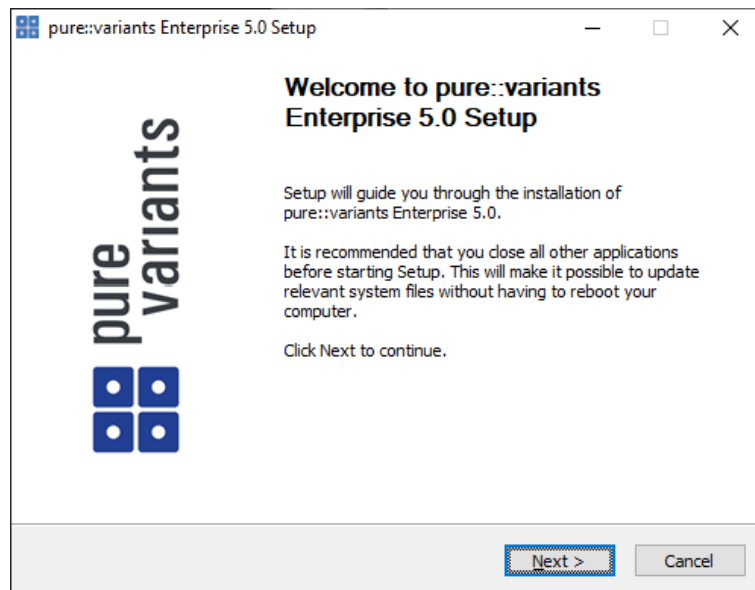

- pure::variants client license
  - If a floating license is used additionally the license server URL is needed to be able to connect and obtain a license form the license server.
- pure::variants client installer or pure::variants update site
- supported 64-Bit Java version installed

The Windows Installer can be downloaded from the pure::variants product web page. Go to <http://www.pure-systems.com/pvde-update>. The product download pages are protected by a password. You need to login by using the email address and the registration number from the license file.

Download the installer package ("pure::variants Windows Installer Package") and extract it. The installer will set up a fresh Eclipse with pure::variants and documentation. Start the installation by double-clicking "Setup Enterprise X.Y.ZZ.exe". Running the pure::variants enterprise installer requires Administrator privileges.

All pure::variants extensions available for the account are automatically included in the Windows Installer download. However, some may not be enabled by default in Installer. Make sure to select the desired extensions during the installation process. Later updates to the extension selection can be done either by reinstalling pure::variants or by following the alternatives described in [the section called "Using update site"](#).

**Figure 2. pure::variants Client Installer**

Click *Next*.

**Figure 3. Setup pure::variants Client License**

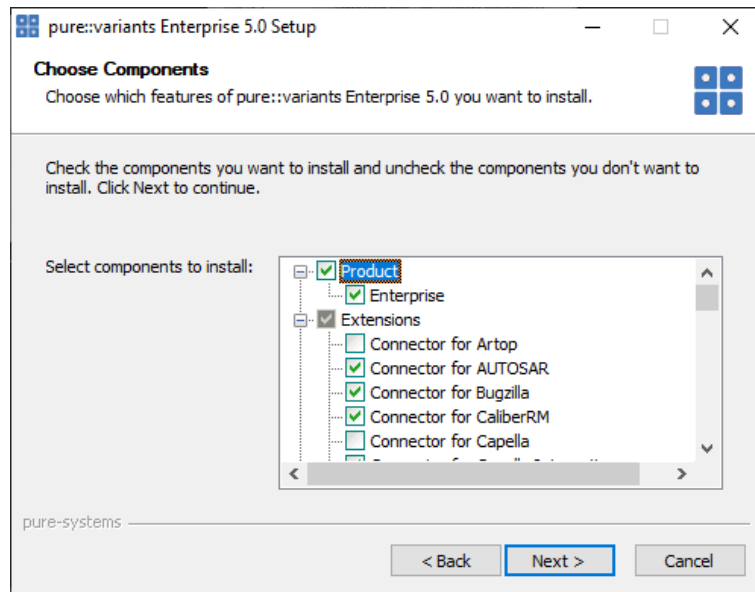

Read the license agreement and after accepting it click *Next*.

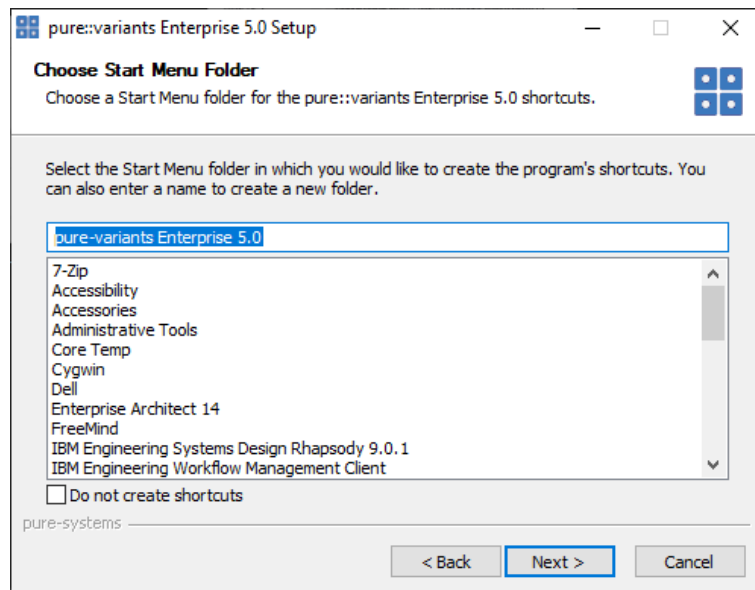

**Figure 4. Setup pure::variants Client Installation Location**

Select the folder where to install the pure::variants client files. Click *Next*.

**Figure 5. pure::variants Client Feature Selection**

Select the connectors which shall be installed with the pure::variants client. Click *Next* after the feature selection is complete.

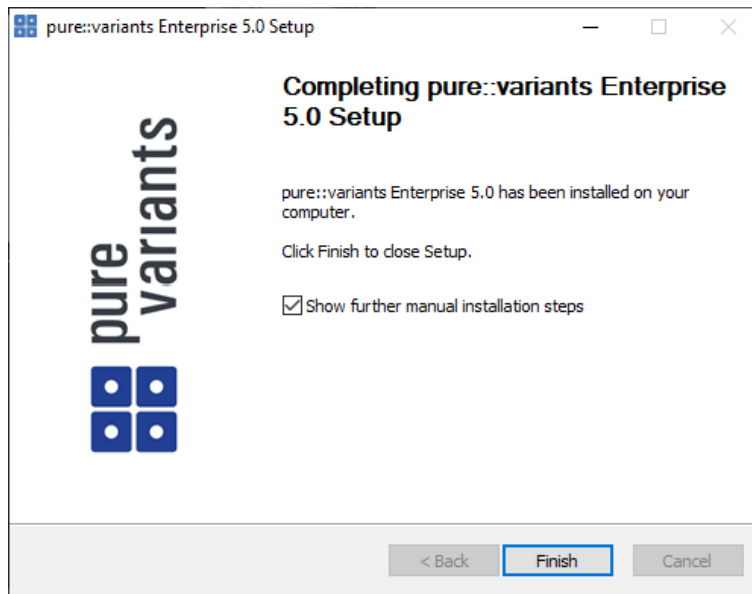

**Figure 6. Setup pure::variants Client Start Menu**

Enter the name for the Windows start menu entry, or disable the creation of the start menu entry. Click *Next*

The next pages may show information about pure::variants integrations, which are installed along with the pure::variants client. If no connector was selected providing an integration, this page will show the *Install* button.

Click *Install* to start the installation process.

**Figure 7. Setup pure::variants Client Finish Page**

The Option *Show further manual installation steps* will open a text document showing more information about the installed integrations and possible manual installation steps, which have to be performed for the integrations to work properly.

## pure::variants Enterprise Installer Command Line Options

The pure::variants installer provides the following command line options:

**Table 1. pure::variants Installer Command Line Options**

Option	Description
/S	Run the installation in silent mode. No installation dialog is opened.  Automatically installs the default selected software packages, or all if used together with option /ALL.
/ALL	Select all packages for installation.
/NODOTNET	Skip installation of the .NET 4 Framework.
/NOINTCOMP	Skip installation of the integration components for Java & .NET.
/JAVA	Location of the Java executable to be used for the installation.  Example: /JAVA="C:\Program Files\Java\jre6\bin\java.exe"
/ECLIPSE	Path to an existing Eclipse installation into which to install pure::variants as a feature, instead of installing pure::variants as a stand-alone application.  This directory must contain the file eclipse.exe.  Example: /ECLIPSE="C:\Program Files\Eclipse 3.8\eclipse"
/D	Path to the directory where to install the pure::variants stand-alone application.  Must be the last option on the command line and must not contain any quotes, even if the path contains spaces.  Example: /D=C:\Program Files\pure-variants

## Install pure::variants in silent mode

The pure::variants Client installer has a silent mode. This mode installs the pure::variants client without user interaction by just using the standard settings of the pure::variants client installer also considering further options on the command line.

To do this, call the installer with command line option `/S`. See [the section called “pure::variants Enterprise Installer Command Line Options”](#) for all available command line options.

### 3.1.2. Install into an existing Eclipse

pure::variant can be installed into an existing Eclipse based tool chain. To install pure::variants, the pure::variants installer package downloaded from the pure::variants updatesite can be used. We recommend this for all Windows users.

Alternatively the pure::variants update site can be used directly with the Eclipse client. You can also download an archived update site from the pure::variants update site and use this with the Eclipse client (See [the section called “Using update site”](#)).

## Installation Requirements

pure::variants needs to following features to already be installed in the target Eclipse, or the Eclipse instance has to have access to the Eclipse release update site.

- JavaScript Development Tools
  - org.eclipse.wst.jsdt.feature.feature.group
- Eclipse Business Intelligence and Reporting Tools (BIRT)
  - org.eclipse.birt.feature.group
- Graphical Modeling Framework
  - org.eclipse.gmf.feature.group

## Using pure::variants Installer

The installation into an existing Eclipse instance is done the same way as installing pure::variants as stand-alone application (See [Section 3.1.1, “Install with pure::variants Installer”](#)).

There is one difference: the target Eclipse has to be defined with the `/ECLIPSE` command line option.

## Using update site

- Start pure::variants (or the Eclipse into which pure::variants has been installed).
- Select "Help"->"Install New Software...".
- Select "pure::variants update site" from the available Software Sites.

If location "pure::variants update site" is not present, enter your location in the edit field, or press "Add" if you have a local update site at hand.

The location of the site depends on the pure::variants product variant. Visit the pure-systems web site (<http://www.pure-systems.com/pv>) or read your registration email to find out which site is relevant for the version of the software you are using.

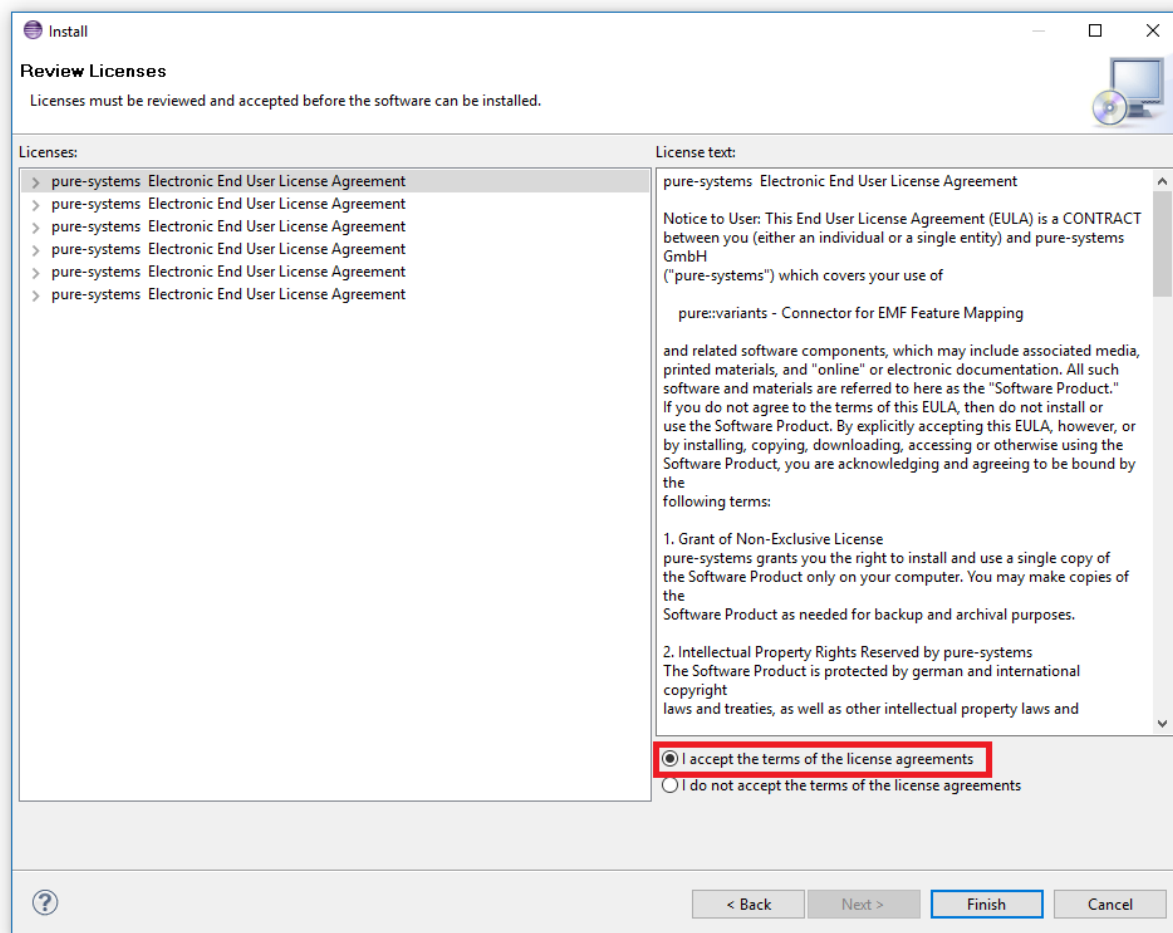

**Figure 8. Update Site Selection**

- Unfold the pure::variants update site and select all features to be updated. Select "Next".

**Figure 9. Pure::variants Plugin Selection**

- Accept license, hit "Next" and then "Finish".

**Figure 10. Licence Agreement**

- In the dialog select "Install all".
- Restart pure::variants when asked for.

If the direct remote update is not possible (often due to firewall/proxies preventing Eclipse accessing external web sites), please go to the web site using an Internet browser:

- For pure::variants Evaluation use <https://www.pure-systems.com/pv-update>
- For pure::variants Enterprise use <https://www.pure-systems.com/pvde-update>

and download the "Complete Updatesite" archive:

- Start pure::variants (or the Eclipse into which pure::variants has been installed).
- Select "Help"->"Software Updates"->"Find and Install...".
- Select "Search for new features to install" and "Next".
- Click on button "Archived Update Site" or "Local Update Site".
- Use "Browse" to select the downloaded archive file.
- Press "Ok". The pure::variants update site from the archive should be selected.
- All other check boxes should be unselected to speed up the process. Press "Finish".

- Unfold everything below pure::variants update site and select all features to be updated. Select "Next".
- Accept license, hit "Next" and then "Finish".
- In the dialog, select "Install all".
- Restart pure::variants when asked for.

## 3.2. Update pure::variants Client

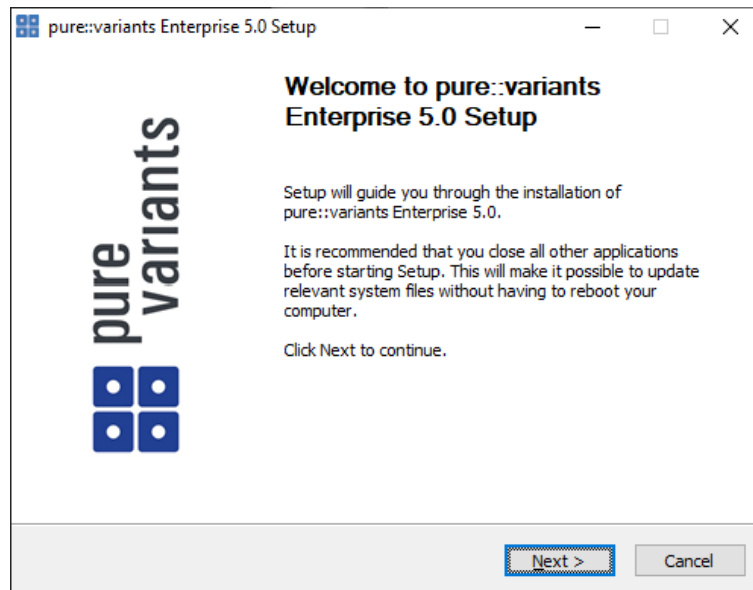

### 3.2.1. Update with pure::variants Installer

This update method is available for Windows only. If you do not use Windows please see [Section 3.2.2, "Update with Update Action"](#) or [Section 3.2.3, "Update with Eclipse package manager"](#).

The Windows Installer can be downloaded from the pure::variants product web page. Go to <http://www.pure-systems.com/pvde-update>. The product download pages are protected by a password. You need to login using the email address and the registration number from the license file.

Download the installer package ("pure::variants Windows Installer Package") and extract it. The installer will check for an existing pure::variants client installation and start in update mode if it finds one. Start the update by double-clicking "Setup Enterprise X.Y.ZZ.exe". Running the pure::variants enterprise installer requires administrator privileges.

**Figure 11. pure::variants Client Installer**

Click *Next*.

**Figure 12. Setup pure::variants Client License**

Read the license agreement, and after accepting it click *Next*.

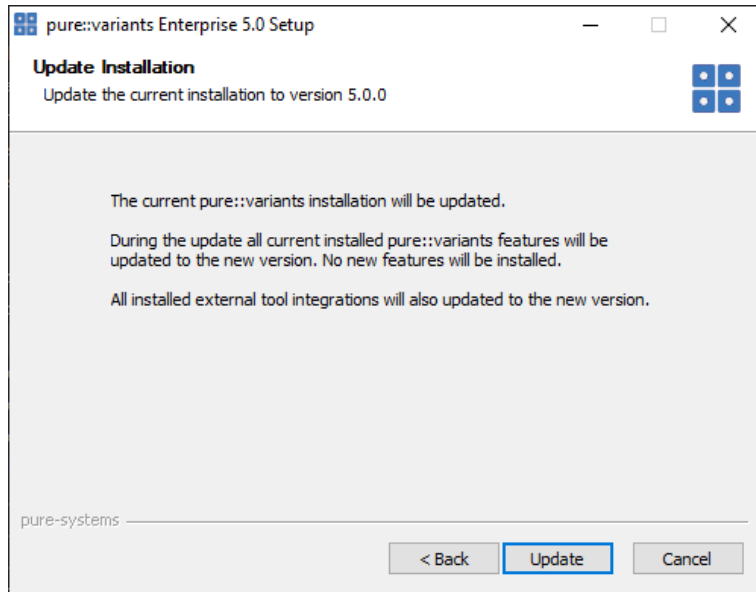

**Figure 13. Choose Update Mode**

Choose *Update* if the current pure::variants client installation shall just be updated with the same installed feature and settings. The installed pure::variants integrations will also be updated. The installed components cannot be changed. If a change of the installed components is wanted, choose *Install* mode.

Or choose *Install* if the current pure::variants installation shall be removed and a new fresh pure::variants client shall be installed. The *Install* option runs the installer as described in [Section 3.1.1, "Install with pure::variants Installer"](#). Please see this section for further installation steps.

Click *Next*.

**Figure 14. pure::variants Start Update**

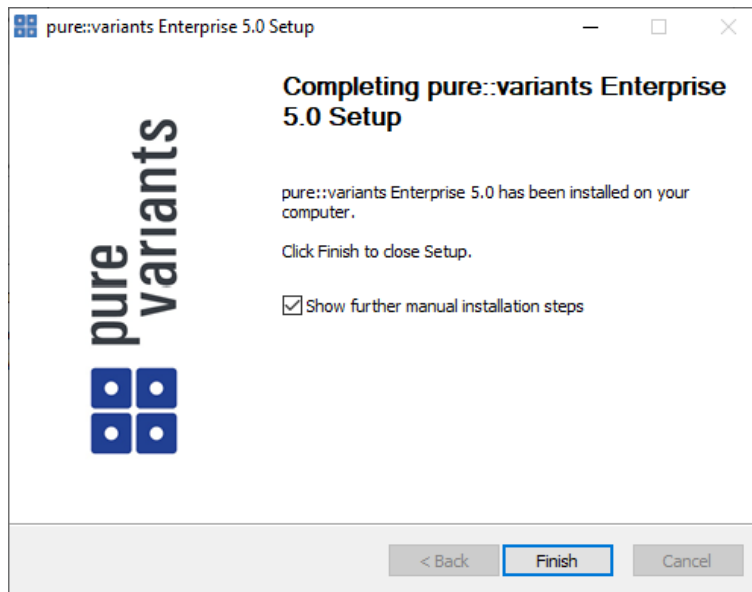

Click *Update* to start the update process.

**Figure 15. pure::variants Installation Progress**

This page is showing the installation details. Click *Next* after this is finished.

**Figure 16. Update pure::variants Client Finish Page**

The Option *Show further manual installation steps* will open a text document showing more information about the installed integrations and possible manual installation steps, which have to be performed for the integrations to work properly.

### 3.2.2. Update with Update Action

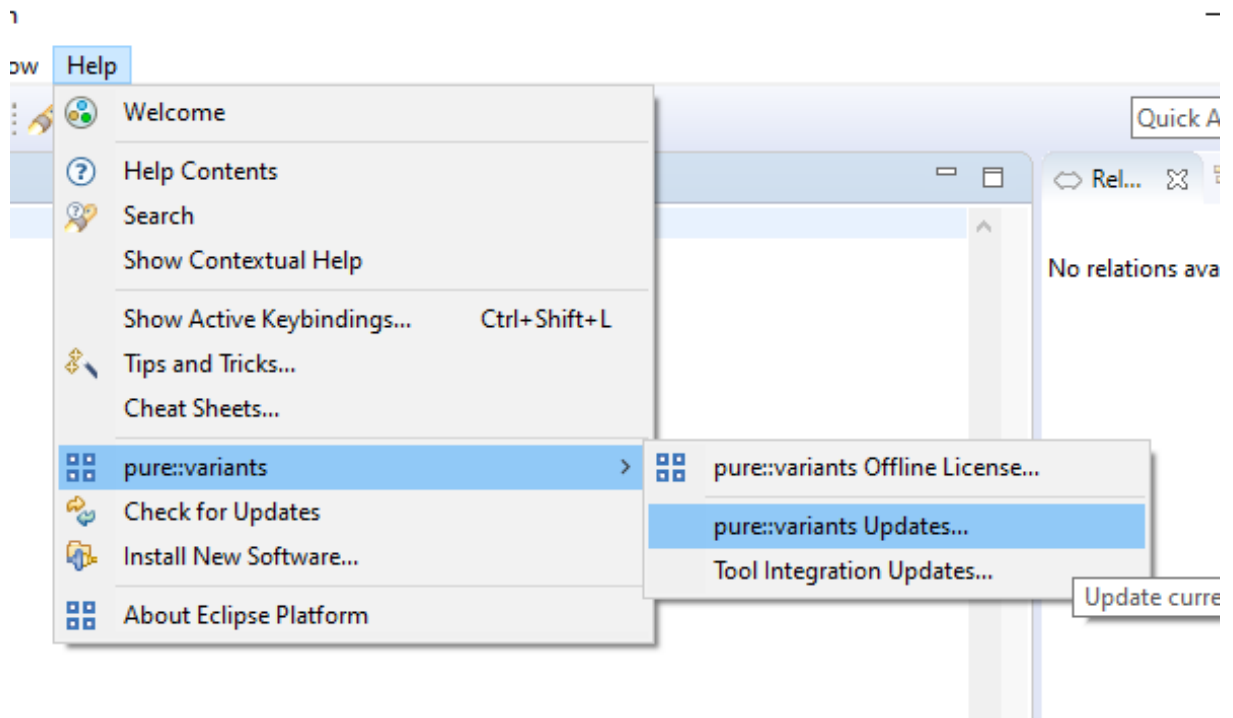

pure::variants has a built-in update action which can be used to perform an update with all the currently installed pure::variants extensions. This update action does not update the installed pure::variants integrations automatically. But they can be easily updated with the *Tool Integration Update* action. See [???](#) for the detailed description.

The update action requires administrator privileges.

#### Note

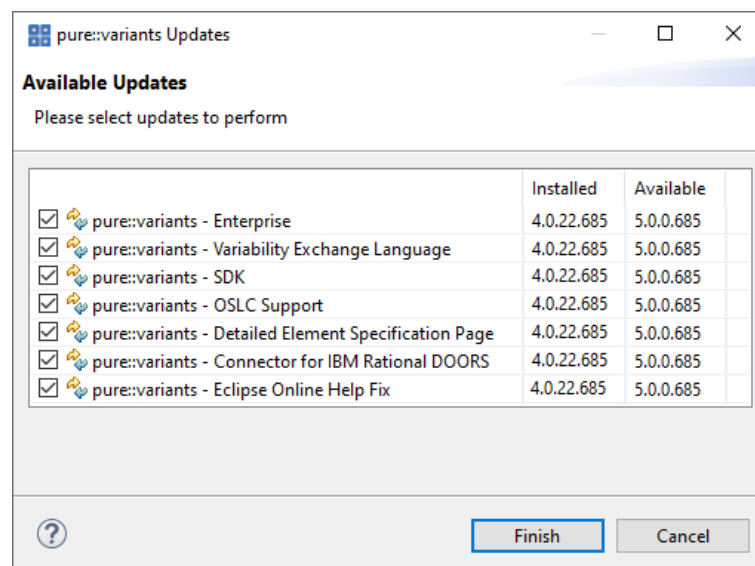

The pure::variants client restarts automatically after the update process finished. So please make sure that all open editors are saved and closed before continuing.

**Figure 17. Start pure::variants Client Update**

Start the pure::variants client update with the *pure::variants Updates...* action from the *pure::variants Help* menu. The action can be found in the *pure::variants* sub-menu.

If the pure::variants client is not started as Administrator, a dialog comes up to inform that pure::variants has to be started as Administrator.

**Figure 18. Start pure::variants Client Update**

A dialog comes up and shows all available updates. Select the features to update and click *Finish*. The update process starts and shows the progress in the same window.

**Figure 19. Start pure::variants Client Update**

After the update process finished, the pure::variants client restarts automatically.

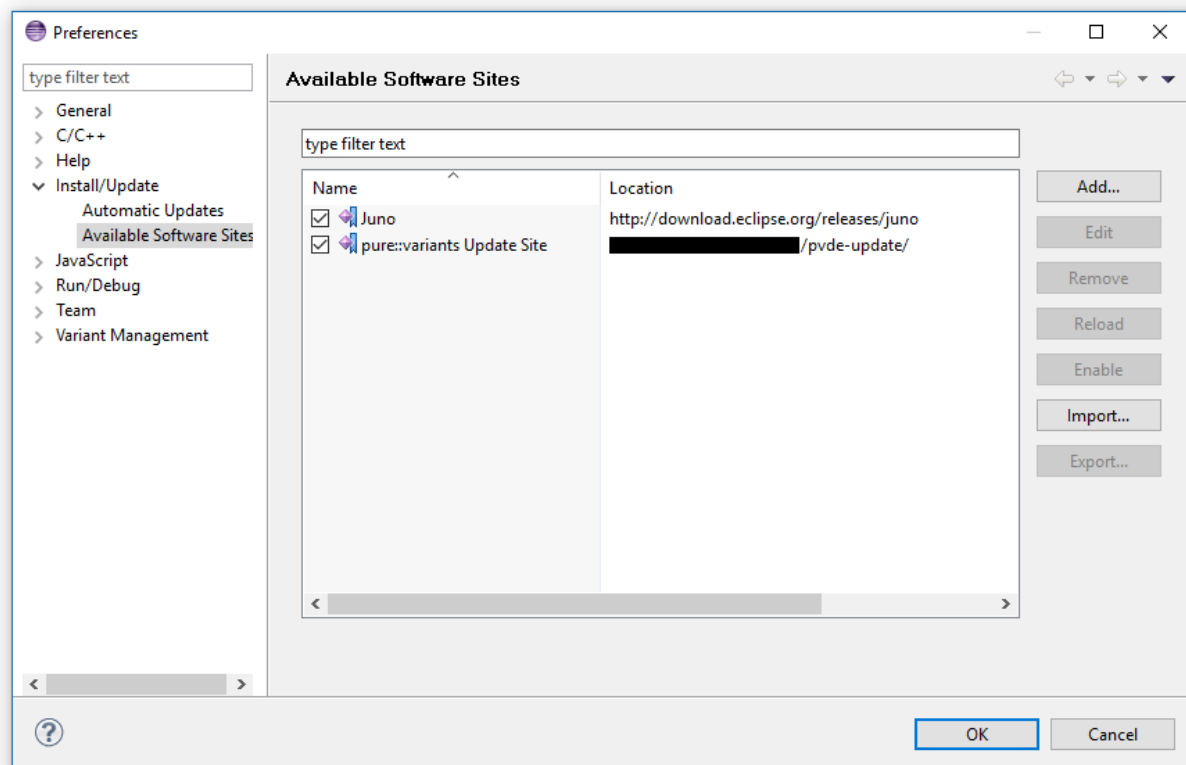

### 3.2.3. Update with Eclipse package manager

The quickest way to get a update for pure::variants is to run the software updater inside pure::variants:

- Start pure::variants (or the Eclipse into which pure::variants has been installed).
- Select "Help"->"Install New Software...".
- Select "pure::variants update site" from the available Software Sites.

If location "pure::variants update site" is not present, enter your location in the edit field, or press "Add" if you have a local update site at hand.

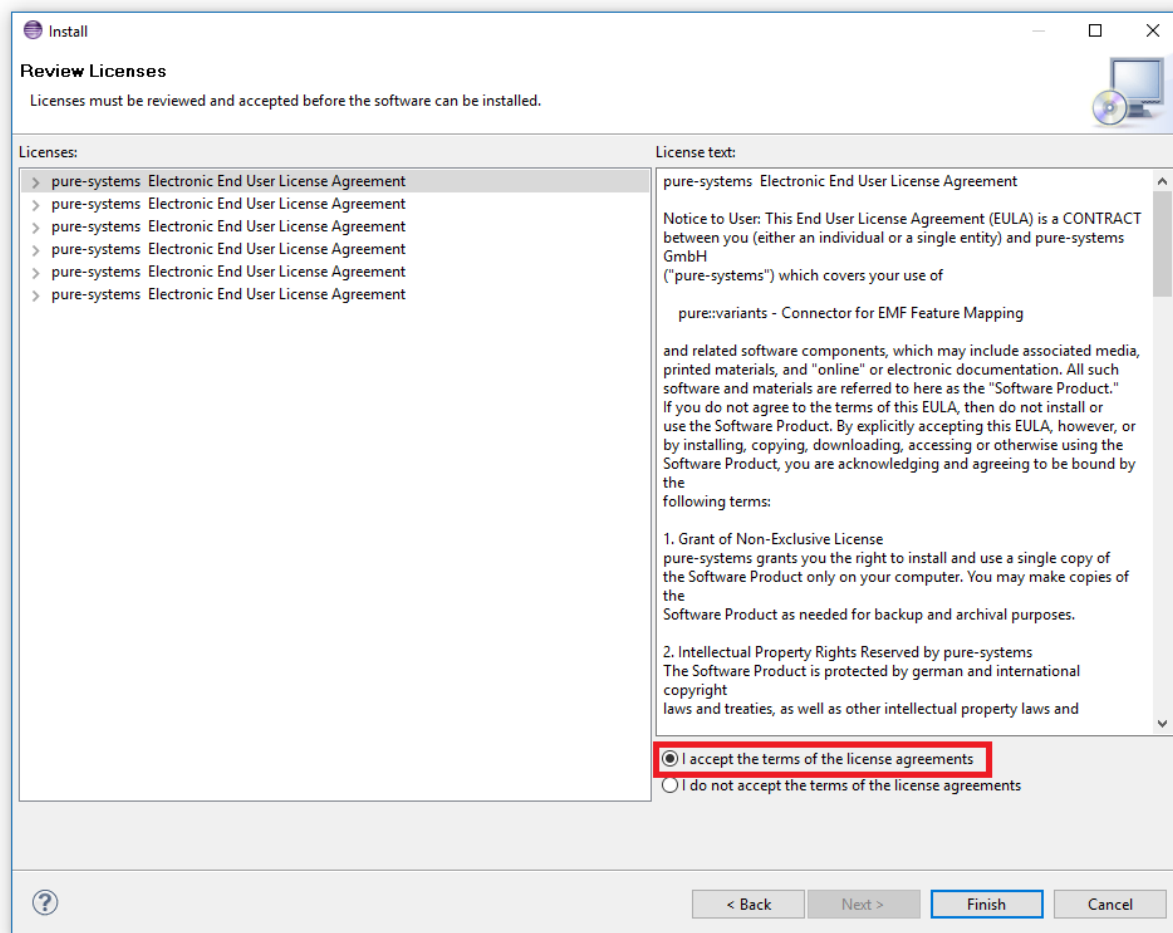

The location of the site depends on the pure::variants product variant. Visit the pure-systems web site (<http://www.pure-systems.com/pv>) or read your registration email to find out which site is relevant for the version of the software you are using.

**Figure 20. Update Site Selection**

- Unfold the pure::variants update site and select all features to be updated. Select "Next".

**Figure 21. pure::variants Plugin Selection**

- Accept the license, hit "Next" and then "Finish".

**Figure 22. Licence Agreement**

- In the dialog select "Install all".
- Restart pure::variants when asked for.

If the online update is not possible (often due to firewall/proxies preventing Eclipse accessing external web sites), please go to the web site using an Internet browser:

- For pure::variants Evaluation use <https://www.pure-systems.com/pv-update>
- For pure::variants Enterprise/Professional use <https://www.pure-systems.com/pvde-update>

and download the "Complete Updatesite" archive:

- Start pure::variants (or the Eclipse into which pure::variants has been installed).
- Select "Help"->"Software Updates"->"Find and Install...".
- Select "Search for new features to install" and "Next".
- Click on button "Archived Update Site" or "Local Update Site".
- Use "Browse" to select the downloaded archive file.
- Press "Ok". The pure::variants update site from the archive should be selected.
- All other check boxes should be unselected to speed up the process. Press "Finish".

- Unfold everything below pure::variants update site and select the features to be updated. Select "Next".
- Accept the license, hit "Next" and then "Finish".
- In the dialog select "Install all".
- Restart pure::variants when asked for.

### 3.3. Uninstall pure::variants Client

#### 3.3.1. Uninstall using pure::variants Uninstaller

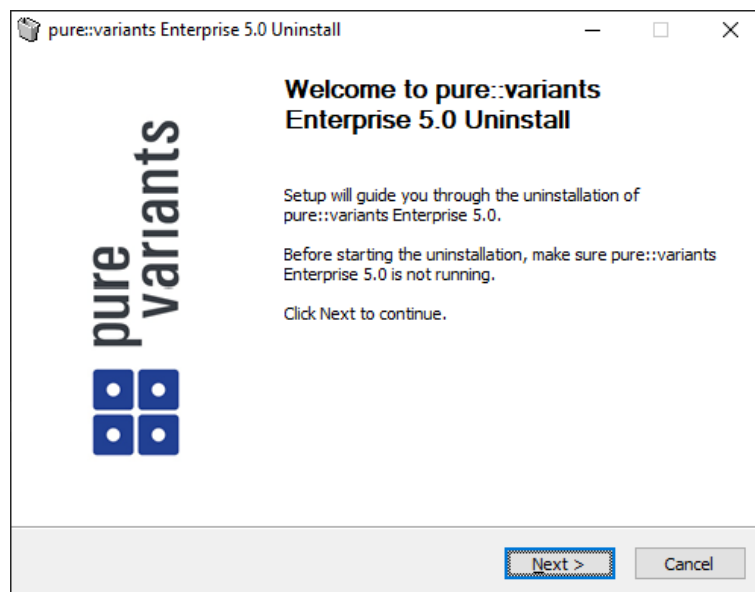

The uninstaller for the pure::variants client can be started in two different ways. The first is to go to the Windows *Add or remove programs* application and search for *pure::variants Enterprise* and start the uninstaller by using the *Uninstall* action. The uninstaller requires Administrator privileges.

**Figure 23. pure::variants Client Uninstaller**

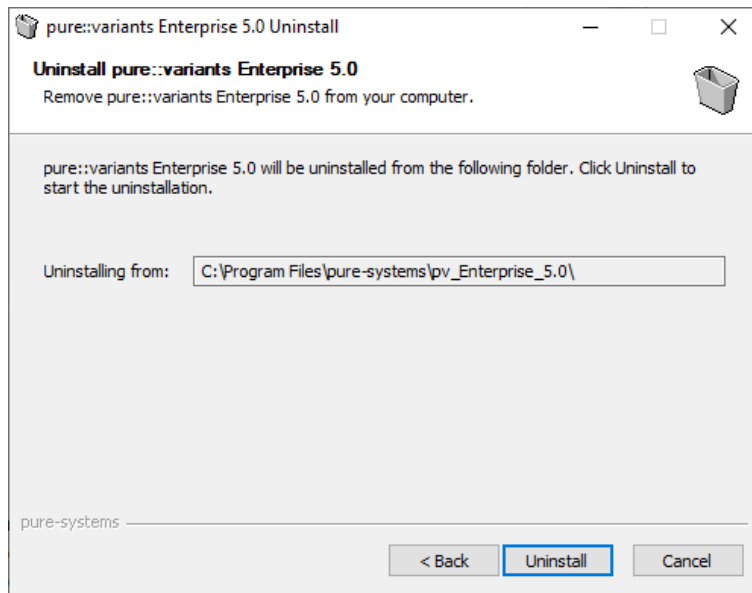

The second way is to navigate to the pure::variants client installation folder and start the uninstaller by double clicking it.

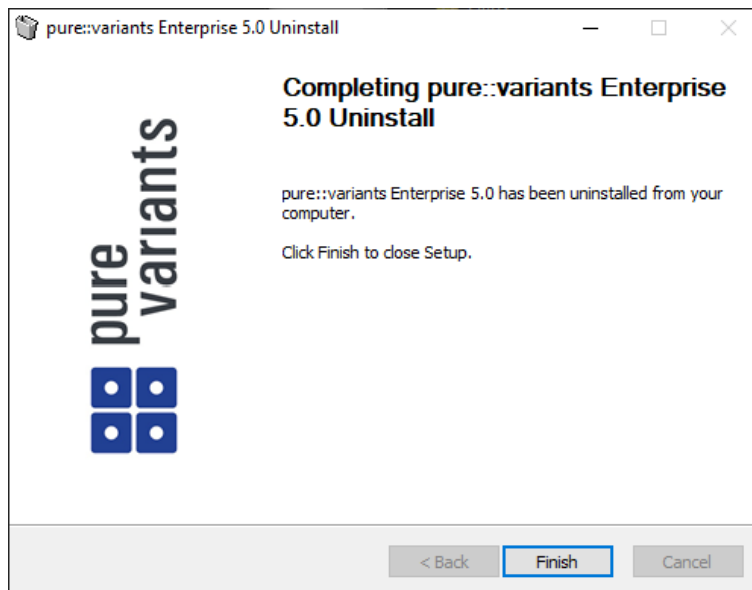

**Figure 24. pure::variants Client Uninstaller**

Click *Next*.

**Figure 25. Uninstall from**

Click *Uninstall* to start the uninstall process.

**Figure 26. Completing Uninstall**

Click *Finish* to close the uninstaller.

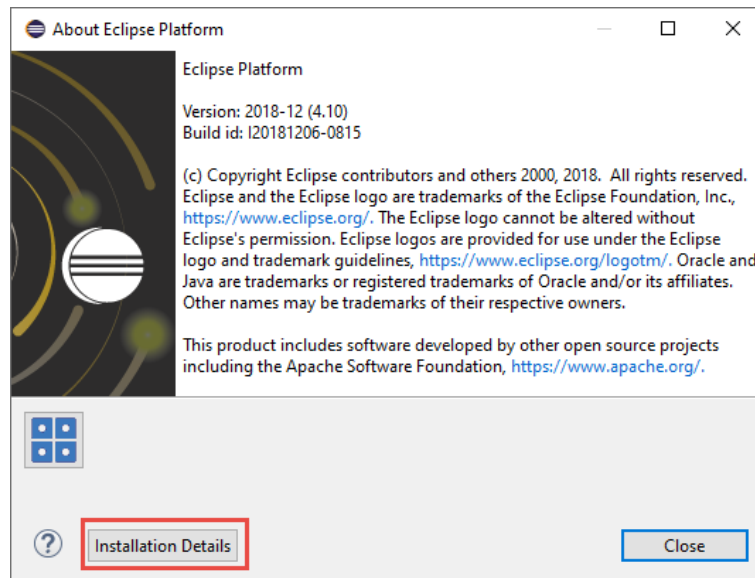

### 3.3.2. Uninstall pure::variants from existing Eclipse instance

There are two ways to remove pure::variants from an Eclipse instance. You can use the Eclipse command line or remove the pure::variants features one by one in the running Eclipse Instance. Either way a cleanup of the Eclipse instance has to be performed afterwards.

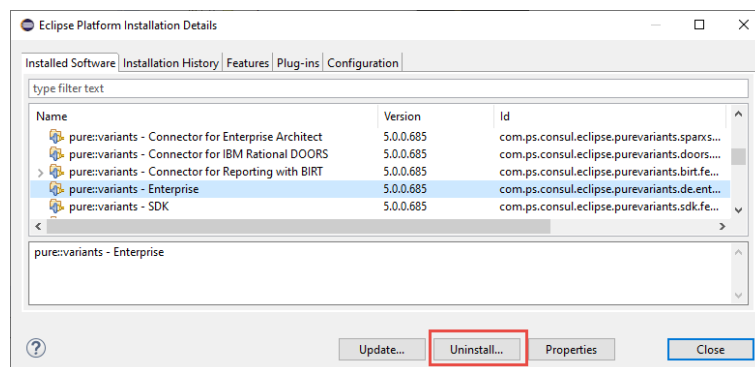

If the Eclipse instance is not needed anymore you can just remove the whole Eclipse installation from the file system. If the Eclipse is of further use, follow one of the installation methods.

#### Uninstall pure::variants in running Eclipse Instance

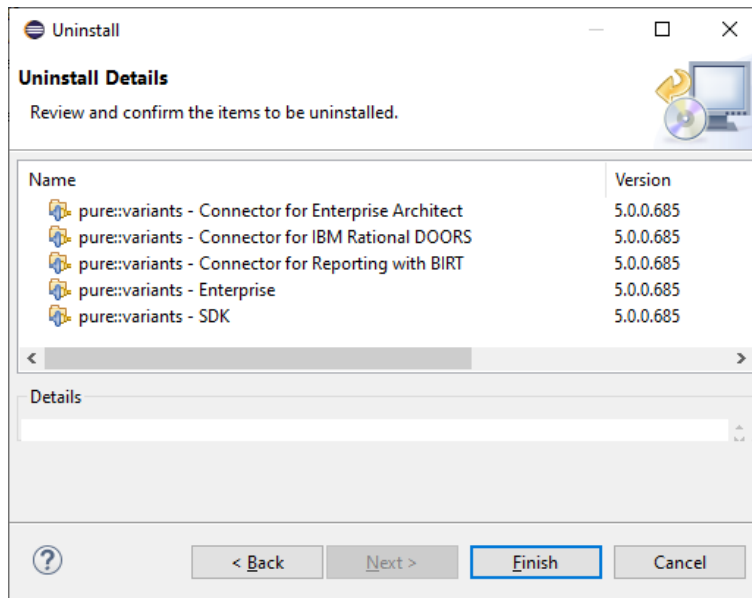

To remove an installed feature from Eclipse using the Eclipse client, open the *About Eclipse Platform* dialog with the *About Eclipse Platform* action in the *Help* menu.

**Figure 27. Eclipse About Dialog**

Use the *Installation Details* button to access the installation details.

**Figure 28. Eclipse About Dialog**

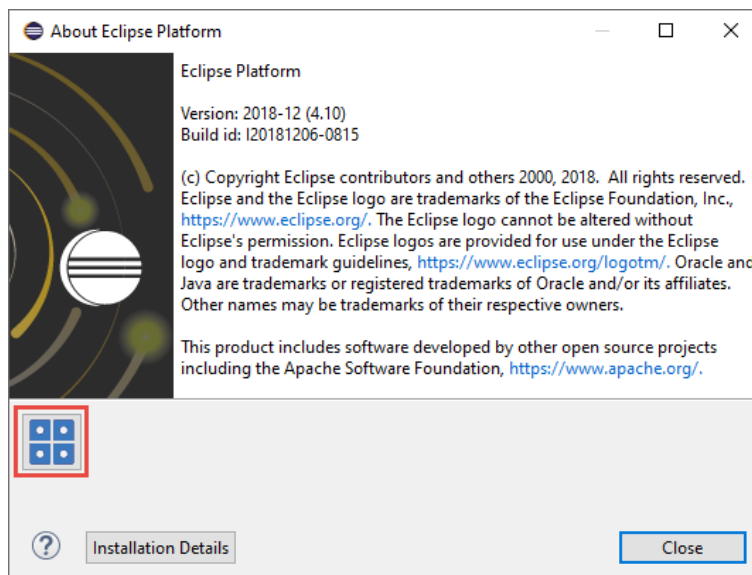

Use the *Uninstall* button to start the uninstallation of the selected features. Selecting multiple features at once is possible.

**Figure 29. Eclipse About Dialog**

Click *Finish* to start the uninstall process. After it finished, Eclipse will prompt you to restart the application. Click *Restart* to finish the uninstallation.

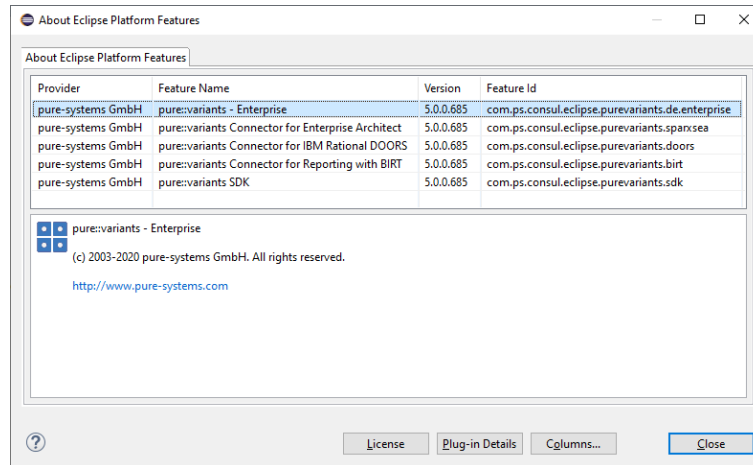

## Uninstall pure::variants using Eclipse uninstall application

To use the uninstall application you need the feature ids of the features you want to uninstall. The feature ids can be found in the *About Eclipse Platform* dialog. Open the dialog with the *About Eclipse Platform* action in the *Help* menu.

**Figure 30. Eclipse About Dialog**

Click on the pure::variants icon.

**Figure 31. Installed pure::variants features**

The feature ids are listed in the *Feature Id* column of the upcoming dialog. All feature ids have to be extended by ".feature.group" and are concatenated with ",". The feature id list for the example shown in the previous figure would be:

```
com.ps.consul.eclipse.purevariants.sparxsea.feature.group,com.ps.consul.eclipse.purevariants.birt.feature.group,com.ps.consul.eclipse.purevariants.de.enterprise.feature.group,com.ps.consul.eclipse.purevariants.doors.feature.group,com.ps.consul.eclipse.purevariants.sdk.feature.group
```

The resulting list of feature ids is used in the following command.

```
"<Eclipse Installation Directory>\eclipse.exe" -nosplash --launcher.suppressErrors -application org.eclipse.equinox.p2.director -uninstallIU "<list of feature ids>" -data "ws" -vmargs -Dequinox.ds.block_timeout=120000 -Dorg.eclipse.ecf.provider.filetransfer.retrieve.readTimeout=120000 -Declipse.p2.mirrors=false -Xms100m -Xmx2048m -Xmnx64m -Xgcpolicy:gencon -XX:MaxPermSize=512M -Xcompressedrefs
```

## Cleanup Eclipse after uninstallation

pure::variants stores some settings, license and log files at two locations in the file system. On Windows the first one is C:\Users\\AppData\Roaming\pure-variants-5, and the second C:\ProgramData\pure-variants-5. On Linux based systems the pure-variants-5 folders are located in the users home directory and at /usr/share. These folders should be removed after pure::variants has been completely removed from the computer.

To clean up the Eclipse instance, run the following command.

```
"<Eclipse Installation Directory>\eclipse.exe" -nosplash --launcher.suppressErrors -application org.eclipse.equinox.p2.garbagecollector.application -data "ws" -vmargs -Dequinox.ds.block_timeout=120000 -Dorg.eclipse.ecf.provider.filetransfer.retrieve.readTimeout=120000 -Declipse.p2.mirrors=false -Xms100m -Xmx2048m -Xmnx64m -Xgcpolicy:gencon -XX:MaxPermSize=512M -Xcompressedrefs
```

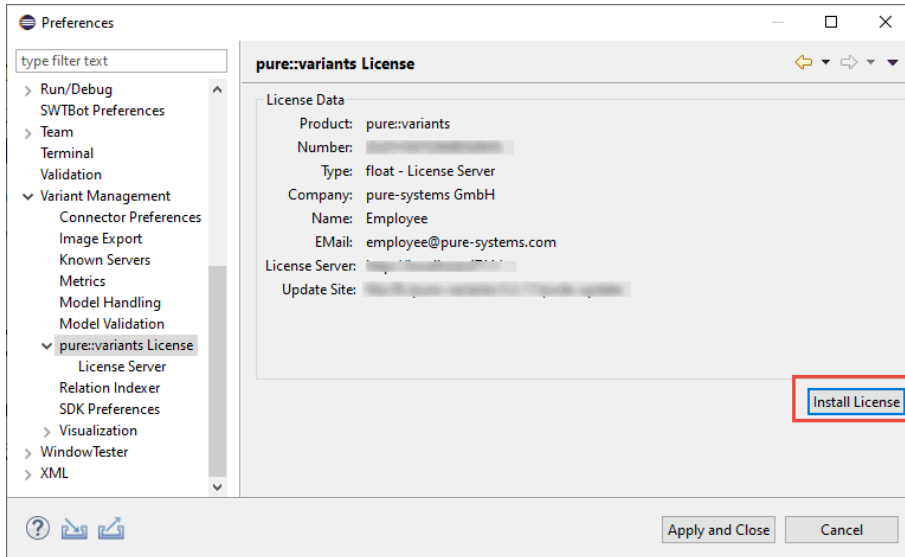

## 3.4. Basic Setup of the pure::variants Client

### 3.4.1. Setup a pure::variants Client License

A valid license file is required in order to use pure::variants. If pure::variants is started and no license is present, then the user is prompted to supply a license. Select the "Yes" button and use the file dialog to specify the license file delivered with pure::variants. The specified license will be stored in the user's application data directory. If you are using multiple workspaces then the license file has to be installed only once. The pure::variants integrations also use the installed license and thus no further setup step is needed here.

To replace an existing pure::variants license, start pure::variants and open the **Preferences** (menu Window -> Preferences). Navigate to **Variant Management -> pure::variants License** and use the **Install License** button to select the new license.

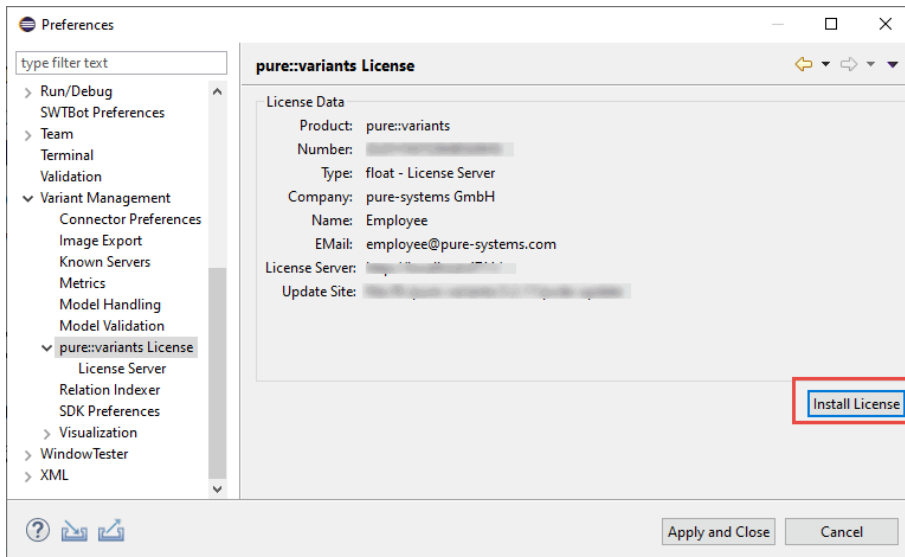

**Figure 32. pure::variants License Preferences**

### 3.4.2. Update a pure::variants Client License

If pure::variants is not explicitly asking for a new license, the update can be forced by starting pure::variants and opening menu **Window -> Preferences**. Select **Variant Management -> pure::variants License** and install the license using the provided **Install** button.

**Figure 33. pure::variants License Preferences**

### 3.4.3. Add pure::variants Client License using environment variable or Java property

For central or automatic deployed pure::variants clients it may be necessary to also automatically deploy or update the pure::variants client license. For this use case the variable **PVLICENSE** can be used. This variable can either be introduced as an environment variable or just added as a Java property to the command line starting pure::variants. If this variable is set, the given license is used instead of a possibly previously installed license.

Example for the command line parameter: *-DPVLICENSE=C:/absolute/path/to/the/license/file.lic*

## 3.5. Trouble Shooting

### 3.5.1. pure::variants is low on memory

If pure::variants is low on memory it can result in out of memory errors or causing pure::variants to run very slow since Java is trying to free up memory constantly by running the garbage collector.

To solve that problem pure::variants needs to be enabled to use more memory. This can be done by editing the eclipse.ini file, which is located in <pure::variants installation path>\eclipse\eclipse.ini.

Add the following three lines to the end of the ini file, if not existing yet. The first line tells Eclipse that there are Java Virtual Machine options following. Xms defines the minimal amount of memory Java is reserving. Xmx defines the maximum amount of memory Java is allowed to use. The default value is 1024 MB. We recommend to set the value to 6144 MB .

```
-vmargs  
-Xms40m  
-Xmx6144m
```

#### Note

If Eclipse does not start after the eclipse.ini was changed, the maximum amount of memory defined is not valid. There are multiple reasons for this, e.g. Java could not reserve enough memory. Try to decrease the defined maximum memory.

## 4. pure::variants Connectors

### 4.1. Installation of pure::variants Connectors

Installing a connector into an existing pure::variants installation works the exact same way like installing the pure::variants client into an existing Eclipse instance. You just have to make sure the depending pure::variants connectors are already installed or they have to be installed together with the new connector. See [the section called "Using update site"](#).
